

Horse Training Clinics

Welcome to the 2017 Sarasota Horse Clinics

Date: March 11, 2017

Time: 9am to 4 pm

Participant Name

Select the clinic(s) you'll be participating in:

Clinton Anderson ☐ Chris Cox ☐ Julie Goodnight ☐

Number of stalls you'll need (\$20 per stall)

Subtotal

Taxes

Total

SUBMIT

This project is based on chapters 7 and 8 material

1. Create a web form to collect the participant name, choice of clinicians , and number of stalls according to the number of horses participating in the events
2. There should be a variable holding the price of the clinic. Each clinic has a different price. For instance, to participate in Clinton Anderson's clinic, riders would pay \$80, for Chris Cox \$75, and for Julie Goodnight \$90.
3. The script needs to calculate the subtotal (adding the prices for the clinic(s) and the cost of the stalls
4. Taxes will be calculated by multiplying the subtotal times .07
5. The total will be the subtotal plus the taxes
6. After the user clicks the SUBMIT button, the subtotal, taxes and total should be properly displayed
7. Have a graphic such as the one above – top/right corner, and use what you learned in chapter 7 to swap the image when the user 'hovers' over it.
8. All fields should be filled in. If any field is not filled in or checked, then display a message
